

ADMINISTRATOR GUIDE

Admin Panel — User Guide

Automation Testing Practice Platform · Manage users, roles, account balances, products, audit history, and broadcasts.

1. Overview

The Admin Panel is a dedicated, role-protected area for platform administrators. It is only visible and accessible to users with the **admin** role. It centralizes six tools:

Dashboard

Live counts of users, catalog, business records, and total balances.

Users & Roles

Create users, switch roles, activate/deactivate, reset passwords, revoke sessions, delete.

Accounts

View every user's checking/savings and credit or debit their balances.

Products

Create, edit, and remove catalog products.

Audit Log

A record of every sensitive admin action.

Broadcast

Send a notification to all users in real time.

2. Accessing the panel

- 1 Open the site and **sign in** with an administrator account.
- 2 An **"Admin Panel"** section appears in the left sidebar (only admins see it).
- 3 Click any item — or go directly to `/admin`.

Demo administrator: `admin@practice.dev` / `Admin123!`

Standard demo user (non-admin): `user@practice.dev` / `User1234!`

Non-admins never see the Admin nav, and visiting `/admin` directly redirects them to the dashboard.

3. Dashboard

● Admin Panel · Dashboard

Dashboard

Users & Roles

Accounts

Products

Total users

42

Active

39

Admins

3

New (7 days)

5

Products

60

Orders

50

Total checking

\$182k

Total savings

\$910k

The dashboard is read-only. It gives an at-a-glance health view grouped into **Users**, **Catalog & business**, and **Accounts** (aggregate balances across all users).

4. Users & Roles

Admin Panel · Users & Roles

Search by name or email

+ Add user

Name	Email	Role	Active	Actions
Platform Admin You	admin@practice.dev	admin		
Demo Tester	user@practice.dev	user		

What you can do

Action	How	Result
Change role	Use the <i>Role</i> dropdown on a row and pick user or admin .	Instantly promotes/demotes that user.
Activate / deactivate	Flip the <i>Active</i> switch.	Deactivated users can't sign in.
Reset password	Click the key icon, type a new password (min 8 chars).	Sets a new password immediately.
Revoke sessions	Click the logout icon.	Forces that user to sign in again everywhere.
Delete	Click the trash icon and confirm.	Removes the user and their bank account.
Add user	Click <i>Add user</i> , fill name/email/role/password.	Creates a new account.

Self-protection (built in): You *cannot* change your own role, deactivate, or delete your own admin account. Those controls are disabled on your own row (marked

You

), and the server rejects the action even if attempted directly. This prevents an admin from accidentally locking themselves out.

5. Accounts & Savings

Admin Panel · Accounts

User	Email	Checking	Savings	Actions
Demo Tester	user@practice.dev	\$5,200.75	\$18,230.40	 Adjust
Platform Admin	admin@practice.dev	\$12,000.00	\$48,000.00	 Adjust

Adjusting a balance

- 1
- Click
- Adjust**
- on a user's row.
- 2
- Choose the account —
- Checking**
- or
- Savings**
- .
- 3
- Choose
- Credit (add)**
- or
- Debit (remove)**
- .
- 4
- Enter an
- amount**
- and an optional description (e.g. "Quarterly bonus").
- 5
- Click
- Apply adjustment**
- .

Every adjustment writes a **transaction record** and an **audit entry**. The change appears immediately on the user's own **Banking** page. A **debit cannot overdraw** a balance — the server returns an error if the amount exceeds the funds.

6. Products

Admin Panel · Products

Search products

+ Add product

Name	SKU	Category	Price	Stock	Status	Actions
Wireless Mouse	WM-001	Electronics	\$24.99	120	active	 
Desk Lamp	DL-114	Home	\$39.00	0	inactive	 

Use **Add product** or the  edit icon to set *name*, *SKU*, *category*, *price*, *stock*, and an **Active** toggle (controls store visibility). The  icon deletes after confirmation. Changes are reflected across the store immediately.

7. Audit Log

● Admin Panel · Audit Log

Time	Actor	Action	Entity	Details
10:24	admin@practice.dev	user.role.update	User	from: user, to: admin
10:21	admin@practice.dev	account.adjust	Account	savings, credit, 500
10:18	admin@practice.dev	user.delete	User	email: spam@x.io

The audit log automatically records sensitive actions — role changes, balance adjustments, deletions, password resets, session revokes, and broadcasts — with **who**, **what**, **when**, and contextual details. Entries are retained for 90 days.

8. Broadcast notification

● Admin Panel · Broadcast

Title

Scheduled maintenance tonight

Message

We'll be upgrading the platform at 9 PM UTC...

Type

Warning ▾

🔔 Send broadcast

- 1 Enter a **title** and **message**.
- 2 Pick a **type**: Info, Success, Warning, or Error.
- 3 Click **Send broadcast** — it is delivered to every user and appears in their notification feed in real time.

9. Security model

- **Role-gated everywhere:** all admin endpoints require a valid login *and* the admin role (server-enforced).
- **Hidden from non-admins:** the nav is conditional, and admin routes redirect non-admins away.
- **Self-protection is server-authoritative:** the UI disables self-actions, and the API independently blocks them (HTTP 403).
- **Validated input:** all requests are schema-validated; debits can't overdraw balances.
- **Auditable:** sensitive actions are logged with actor, IP, and details.

10. API reference (for testers)

All routes are prefixed with `/api` and require an admin bearer token / session.

Method	Endpoint	Purpose
GET	/admin/stats	Dashboard counts
GET	/admin/users	List/search users
POST	/admin/users	Create user
PATCH	/admin/users/:id/role	Change role (self blocked)
PATCH	/admin/users/:id/active	Activate/deactivate (self blocked)
POST	/admin/users/:id/reset-password	Reset password
POST	/admin/users/:id/revoke-sessions	Force re-login
DELETE	/admin/users/:id	Delete user (self blocked)
GET	/admin/accounts	List balances
POST	/admin/users/:id/account/adjust	Credit/debit balance
GET	/admin/transactions	Transaction history
GET	/admin/audit-logs	Audit entries
POST	/admin/notifications/broadcast	Broadcast to all users

User-facing (any signed-in user): `GET /api/account`, `GET /api/account/transactions`, `POST /api/account/transfer` — power the Banking page.
