

Automation Testing Practice Platform

A desktop (PC screen) visual guide. Every screen below is shown at full 1440 px width and annotated so you can see exactly what each control does.

The app ships with **two switchable interfaces** that share the same routes and data — a **Modern** shell (floating header + bottom command dock) and a **Classic** shell (left console rail + flyouts).

40 Practice modules

7 Categories

150 Lessons

18 Courses

11 Async challenges

4 Business workflows

★ How everything connects

From Home, every area is one or two clicks away in both shells.

1 • The Modern shell — header & command dock

The Modern skin keeps chrome out of the way: a floating top header and a macOS-style dock at the

bottom.

WHAT'S IN THIS SCREEN

- **Brand capsule** (top-left) — flask logo + “Automation Lab”; clicking it returns Home.
- **Spotlight search** (center) — “Search or jump to anything...”. Opens the command palette; the `/` hint shows the keyboard shortcut.
- **Actions capsule** (top-right), left → right: `theme` light/dark toggle · `keyboard` Shortcuts & progress · `message` Feedback · `Classic | Modern` interface switch · `Sign in` (or your avatar menu when signed in).
- **Command dock** (bottom, floating) — primary navigation: **Home, Learn, Practice, Challenges, Workflows**, a divider, then the **bento “All apps”** launcher. The active section is filled with the violet→fuchsia gradient; hovering a tile raises it and shows its label.

2 · Modern home (dashboard)

An immersive landing page: hero, live counters, recents, the full course catalog and practice

categories.

The modern automation sandbox

Master UI & API automation in one immersive playground.

Every control ships with stable `data-testid` hooks and accessible semantics — built for Selenium, Cypress and Playwright.

Selenium 6 courses

Beginner

Selenium WebDriver with Java

Start from absolute zero and learn to drive a real browser with Java and Selenium 4 — installation, locators, waits, real interactions and the Page Object Model.

8 lessons 94 min

Beginner

TestNG Test Framework

TestNG turns loose Selenium scripts into a real test framework — annotations, assertions, grouping, data-driven tests, parallel runs and rich reports.

8 lessons 81 min

Beginner

Cucumber BDD with Java

Behaviour-Driven Development with Cucumber lets you write tests as readable Given/When/Then scenarios, then bind them to Selenium step definitions everyone can understand.

8 lessons 82 min

Intermediate

Build a Selenium Java Framework

The capstone: assemble a production-grade automation framework from scratch — Maven, a thread-safe driver factory, Page Object Model, TestNG, Cucumber BDD, logging, reporting, data-driven tests and CI/CD.

14 lessons 174 min

Advanced

Advanced Selenium Automation

Go beyond the basics: relative locators, custom waits, JavaScriptExecutor, the Actions API, Selenium Grid with Docker, design patterns, API+UI hybrid tests, flaky-test retries and DevTools network control — each with runnable Java.

9 lessons 115 min

Advanced

Selenium Real-World Playbook

Beyond tutorials: the messy, real-world Selenium problems senior testers face every day — dynamic locators on live sites, web tables and pagination, windows and tabs, file upload/download verification, session reuse via cookies, shadow DOM and tricky widgets, evidence capture, and headless/CI execution. Every technique is shown on google.com and on this platform.

9 lessons 130 min

Playwright 12 courses

**Beginner**

Playwright Fundamentals

Start from absolute zero with Microsoft Playwright and TypeScript — install it, write your first test, master role-based locators, web-first assertions and the auto-waiting engine that makes Playwright tests fast and stable.

📖 8 lessons ⌚ 93 min

**Intermediate**

Playwright Essentials

Level up from scripts to a real suite: filter and chain locators, handle every form control, dialogs, frames and tabs, master fixtures and hooks, configure projects, and structure tests with the Page Object Model.

📖 7 lessons ⌚ 91 min

**Advanced**

Advanced Playwright

The techniques senior SDETs use daily: reuse authentication via storage state, intercept and mock the network, test APIs alongside the UI, do visual and component testing, and run fast with parallelism, sharding and smart retries.

📖 8 lessons ⌚ 107 min

**Advanced**

Playwright Expert & CI

The expert layer: master the trace viewer and debugging, wire Playwright into CI/CD with sharding and Docker, choose reporters, manage test data, automate accessibility checks, apply advanced architecture patterns, and migrate a Selenium suite to Playwright.

📖 7 lessons ⌚ 90 min

**Intermediate**

Playwright Locator Mastery

Go far beyond the basics of locating elements: ARIA roles and accessible names, the text and CSS engines, XPath when you truly need it, filtering and chaining, frames and shadow DOM, tables and virtualized lists, custom selector engines, and a full troubleshooting playbook for strict-mode and timing issues.

📖 8 lessons ⌚ 101 min

**Advanced**

Network, Mocking & API Deep Dive

Everything the network layer can do: precise route patterns, mocking REST and GraphQL, modifying live responses, recording and replaying HAR, WebSocket and SSE testing, the full request fixture, token/cookie auth flows, and throttling/offline simulation — with assertions on exactly what the app sends.

📖 8 lessons ⌚ 102 min

**Advanced**

Test Architecture & Fixtures

Structure a Playwright codebase that stays fast and maintainable at scale: fixture scopes and options, page objects as fixtures, data factories, custom matchers, tagging and project matrices, global setup/teardown, environment and secret management, and a monorepo-friendly folder strategy.

📖 8 lessons ⌚ 97 min

**Advanced**

Playwright CI/CD & DevOps

Operate Playwright at team scale: a hardened GitHub Actions workflow, sharding and report merging, the official Docker image, GitLab/Azure/Jenkins recipes, reporting pipelines, flaky-test handling in CI, performance and cost tuning, and using tests as deployment gates.

📖 8 lessons ⌚ 93 min

**Advanced**

Visual, Accessibility & UX

Test what users see and how they navigate: pixel snapshots with masking and thresholds, cross-platform baselines, axe-core accessibility scans, keyboard and focus-order testing, responsive/device coverage, internationalisation and RTL, plus dark mode and reduced-motion.

📖 8 lessons ⌚ 92 min

**Advanced**

Reliability, Debugging & Performance

The deep mechanics of stable tests: how auto-waiting actually decides actionability, root-causing flakiness, mastering the trace viewer and inspector, every timeout type, test isolation and state leaks, capturing performance metrics, and keeping long runs stable.

📖 8 lessons ⌚ 92 min

**Advanced**

Playwright Real-World Recipes

Battle-tested recipes for the flows you automate every week: login patterns, file upload/download, a full e-commerce checkout, data grids with sorting and pagination, multi-tab and window handling, OTP/2FA flows, payment iframes, and drag-and-drop/canvas — all runnable on this platform's practice modules.

📖 8 lessons ⌚ 95 min

**Advanced**

Expert Scenarios & Interview Prep

The judgement calls senior SDETs are hired for: common interview questions, a deep Selenium-vs-Playwright comparison, strategies for thousand-test suites, the test pyramid and what to automate, mobile-web strategy, component-testing patterns, API contract testing, and a capstone that assembles a complete framework.

📖 8 lessons ⌚ 96 min

Browse practice modules

Pick a category to explore its modules and challenges.

12

Form Controls

Inputs, buttons, selects, checkboxes and the core building blocks of every form.

6

Interactions

Mouse, keyboard, drag-and-drop and pointer-driven behaviours.

9

Components

Composite widgets like modals, tables, sliders and date pickers.

9

Data & Network

API calls, file uploads, websockets and live streaming data.

4

Advanced DOM

Shadow DOM, iframes, nested frames and other tricky structures.

11

Async Challenges

Timing, dynamic ids, stale elements and deliberately flaky scenarios.

4

Business Workflows

End-to-end, multi-step journeys across realistic applications.

WHAT'S IN THIS SCREEN

- **Hero** — badge “The modern automation sandbox”, headline “Master UI & API automation in one immersive playground”, and a note that every control ships with stable `data-testid` hooks for Selenium, Cypress and Playwright.
- **Primary CTAs** — [Start learning](#) (→ Learning), [Browse practice modules](#) (→ Practice) and [All modules](#) (opens the bento launcher).
- **Live stats bar** — five counters computed from config: **40** Practice modules · **7** Categories · **150** Learning lessons · **11** Async challenges · **4** Business workflows.
- **Search field** — filters both modules and courses as you type.
- **Recently viewed** — quick links back to modules you opened (e.g. “Form & Validation”).
- **Learn step by step** — the full catalog grouped by tool family: **Selenium (6 courses)** and **Playwright (12 courses)**. Each card shows level [Beginner](#) [Intermediate](#) [Advanced](#), lesson count and total minutes.
- **Browse practice modules** — category cards with live counts: Form Controls (12), Interactions (6), Components (9), Data & Network (9), Advanced DOM (4), Async Challenges (11), Business Workflows (4).

3 • Explore hub

A guided chooser that routes you to the right area: learn, practise, challenge or build.

WHAT'S IN THIS SCREEN

- **Path cards** — large entry points for **Learning** (guided courses) and **Practice** (hands-on modules), each with its own live counts.
- **Challenges & Workflows** — secondary entries for deliberately flaky scenarios and end-to-end business journeys.
- **Meta line** — reiterates the catalog size (courses · lessons) so you know the scope before diving in.

4 • Learning catalog

Courses are segregated by tool family, then by level — so you pick a stack and start at the right

place.

/learning

Learning Modules

Guided, in-depth courses for two automation stacks — Selenium (Java) and Playwright (TypeScript) — from your first test to production-grade, expert-level frameworks. Read the lessons with runnable programs, then practise on the live modules.

1 What is Selenium & Test Automation?

Understand what Selenium is, why teams automate browsers, and how the pieces fit together.

🎯 3 learning objectives

Beginner

8 min

2 Setting Up Java, Maven & Selenium

Install the JDK, an IDE and Maven, then create a Selenium project with the right dependencies.

🎯 3 learning objectives

Beginner

12 min

3 Your First Selenium Test

Write, run and understand a complete Selenium test that opens a page and asserts the title.

🎯 3 learning objectives

Beginner

10 min

4 Locators: Finding Elements

Master the eight Selenium locator strategies and learn which to prefer for stable tests.

🎯 3 learning objectives

Beginner

14 min

5 Interacting With Elements

Click, type, read text, and inspect element state with the core WebElement methods.

🎯 3 learning objectives

Beginner

11 min

6 Waits: Handling Timing

Stop flaky tests by replacing Thread.sleep with implicit, explicit and fluent waits.

🎯 3 learning objectives

Beginner

13 min

7 Dropdowns, Alerts, Frames & Windows

Handle the tricky browser constructs: select menus, JavaScript alerts, iframes and new tabs.

🎯 3 learning objectives

Intermediate

12 min

8 The Page Object Model (POM)

Organize tests into maintainable page classes that hide locators behind readable methods.

🎯 3 learning objectives

Intermediate

14 min

WHAT'S IN THIS SCREEN

- **Breadcrumbs** — show Practice → category → module so you always know where you are.
- **Form fields** — name, email, a password with rules, a matching confirmation, country select, a bio counter and a terms checkbox; errors appear once a field is touched.
- **Gated submit** — stays disabled until the whole form is valid.
- **Result panel** — on success, the submitted values are echoed back so a test can assert the outcome.
- Every input has a stable `data-testid` and proper ARIA roles for reliable selectors.

8 • Command palette (press `/`)

A keyboard-first jump menu across every module and course.

WHAT'S IN THIS SCREEN

- **Search input** — type to fuzzy-match modules, courses and quick actions.
- **Grouped results** — jump targets are organised so you can arrow-key down and press Enter to navigate.
- **Keyboard hints** — **↑** / **↓** to move, **Enter** to open, **Esc** to close.

9 • Shortcuts & progress (press **?**)

A single dialog for keyboard shortcuts and your local learning/practice progress.

WHAT'S IN THIS SCREEN

- **Progress rings** — two rings show how many **Learning** lessons and **Practice** modules you've completed (stored locally).
- **Shortcut list** — **/** open search, **↑/↓** move, **Enter** open, **Esc** close, **?** open this panel.
- **Reset progress** — clears your locally-stored completion state.

10 • App launcher (bento)

The bento icon in the dock opens a full app/module launcher with search and pinning.

WHAT'S IN THIS SCREEN

- **Search** — filter all destinations instantly.
- **Tiles** — quick access to top-level areas and individual modules.
- **Pinned / customise** — keep your most-used destinations within one click.

11 • Sign in

Credentials post in the request body — never in the URL. The SPA redirects you back to the page

you wanted.

The image shows a web browser window with a light purple header bar containing three colored dots (red, yellow, green) and the text "/login". The main content area is a light gray gradient. Centered in this area is a white rounded rectangle containing the login form. At the top of the form is a purple square icon with a white flask symbol. Below the icon is the heading "Welcome back" in bold, followed by the subtext "Sign in to access protected practice modules." in a smaller font. There are two input fields: "Email" with the placeholder text "you@example.com" and "Password" with masked characters "*****". Below these fields is a prominent purple "Sign in" button. At the bottom of the form, there is a link that says "No account? Create one".

WHAT'S IN THIS SCREEN

- **Email + password fields** with a single **Sign in** button and a "Create one" link to register.
- **Why sign in** — full lesson content and protected actions unlock after authentication.

12 • The Classic shell — console rail

The Classic skin uses a slim left icon rail with slide-out flyouts and a minimal command header.

WHAT'S IN THIS SCREEN

- **Left rail** — the brand flask plus icon items: **Home, Learn, Practice, Challenges, Workflows** (and **Admin** for admins), with an **Apps** launcher pinned at the bottom. The active item shows a violet accent bar.
- **Console header** — a wide search field (with the `/` hint) plus the same quick actions: launcher, theme, Shortcuts & progress, Feedback, the Classic | Modern switch and Sign in.
- **Breadcrumbs** — sit just under the header to track your location.

13 • Classic home

The same content as the Modern home, rendered in the calmer console layout.

WHAT'S IN THIS SCREEN

- **Hero** — “Practice UI & API automation in one safe, realistic sandbox”, with **Start learning**, **Browse practice** and **All modules** actions.
- **Stat tiles** — the same live counts as the Modern home, laid out as cards.
- **Learn step by step** & **Browse practice modules** — identical catalog and category grids, so anything you automate works in either skin.

14 · Classic rail flyout

Clicking **Learn** (or **Practice**) on the rail slides out a panel with the full hierarchy.

WHAT'S IN THIS SCREEN

- **Flyout header** — names the section (Learn / Practice) with a close button.
- **Grouped tree** — for Learn: **Selenium** and **Playwright** families, each listing their tracks with a level dot and a count pill.
- **“All courses”** shortcut — jumps straight to the full catalog; clicking any item closes the flyout and navigates.

Visual guide for PC screens · screenshots captured at 1440 px from the live app and stored in `docs/guide-assets/`. Both interfaces expose the same routes, data and `data-testid` hooks.
